

SUPPLEMENTARY MATERIAL

corresponding to:

Zebrafish enhancer trap line recapitulates embryonic *aquaporin 1a* expression pattern in vascular endothelial cells

KIRA PROULX, KUAN SHEN WONG, DARIUS BALCIUNAS and SAULIUS SUMANAS

Supplementary Fig. S1. Diagram of the enhancer – gene trap cassette in the GBT-B1 vector. It contains carp β-actin splice acceptor (cSA) from GBT-P6 (Sivasubbu et al., 2006) and GBT-R15 (Petzold et al., 2009) vectors, zebrafish β-actin 3'UTR and poly (A) site (polyA) from GBT-R15 vector (Petzold et al., 2009), AUG-less GAL4-VP16 (^Gal4-VP16) (Koster and Fraser, 2001), 14x UAS-eGFP expression cassette with minimal β-actin promoter (Koster and Fraser, 2001) and T5 and T3 miniTol2 recognition sites (Balciunas et al., 2006). Tol2-R3 primer location is shown, which was used to sequence the flanking genomic sequence.

Supplementary Fig. S2. Single-pass DNA sequence of inverse PCR fragment obtained using Tol2-R3 primer shows the GBT-B1 vector (sequence in Blue) and the flanking genomic DNA sequence (yellow background) which is located 23.7 kb upstream of aqp1a coding sequence.
